Claim Rejections – 35 U.S.C. 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

The disclosed invention is inoperative and therefore lacks utility. Invention disclosed in claims 1, 11, 21 is inoperative because it fails to disclose any step for building an index.

In claims 11-20, "An article of manufacture" is not consistent with the steps or method defined in the claims. The operations claimed do not define the invention of an article of manufacture. The steps do not "manufacture" anything.

In claim 21-30, "A computer system" is not consistent with the steps or method defined in the claims. The claimed limitations do not construct a computer system. Further, "logic" is not patentable. Is it a method?

Claim Rejections – 35 U.S.C. 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-30 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 1, 11, 21, "Global analysis computations" and "intermediate results" are not defined and understood.

In claims 2, 12, 22, "global analysis information" is not defined and understood.

In claims 3, 13, 23, "global analysis computations" is not defined and understood.

In claims 4, 14, 24, "global analysis computations" is not defined and understood.

In claims 8, 18, 28, "global analysis computations" is not defined and understood.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Henry et al. (6,622,211) discloses a virtual set cache that redirects store data to correct virtual set to avoid virtual set store miss penalty. Nelson et al. (6,243,713) discloses a multimedia document retrieval by application of multimedia queries to a unified index of multimedia data for a plurality of multimedia data types. Gable (6,029,165) disclose a search and retrieval information system and method.
